Frontend developer

Construction Management System

This project is a specially designed management system for organizations in the construction industry. The main purpose of the project is to optimize work processes and simplify management for organizations.

My Role: Integrating the project for new clients and adding new features to the system.

Key Features of the System:

- Statistics Management: Monitor general indicators and reports related to construction processes.
- Employee Management: Input, edit, and track information about the organization's employees.
- Building Management: Store and manage information about planned, under-construction, and available-for-sale buildings.
- Price Management: Manage and update prices for construction materials and services.
- Client Management: Manage information about the organization's clients and facilitate communication with them.

Technologies:

HTML5, CSS, JavaScript, React.js, TailwindCSS, React Query, Redux, Redux Toolkit, Ant Design (AntD)

Additional Experience

- Mentorship: I work as a mentor in a frontend development course at a company's training center, teaching students HTML, CSS, JavaScript, and React.js.
- Projects: I have developed websites and Telegram bots for universities and various service-oriented

companies.

- SEO Optimization: I have worked on SEO optimization for websites, helping them achieve higher rankings in search engines.

ABIZ Company

Tashkent

Frontend developer

ABIZ is a company in Uzbekistan specializing in delivering food products to grocery stores nationwide, with branches in all regions.

We developed a project to automate the company's business processes. I actively participated in this project as a frontend developer and contributed to the following tasks:

My Contributions:

- Working with WebSocket technology: Developed a feature to send real-time notifications to warehouse employees when an order is approved.
- Statistics Monitoring Interface: Designed a user-friendly interface to view statistical data for individual branches and consolidated data across all branches.
- Inventory Management: Integrated features for tracking and managing warehouse products into the user interface.

Project Objectives:

- Statistics Monitoring: View real-time statistics for individual branches and consolidated data for the entire company.
- Inventory Management: Track and manage products in stock for each branch.
- Employee Management: Monitor and update information about employees in each branch.
- Revenue Tracking: Analyze and manage revenue data for each branch and the entire company.
- Client Management: Maintain and update client information across all branches.

Order Workflow:

- Agents receive orders from clients and input them into the system.
- Once approved, notifications are sent to warehouse employees.
- The warehouse team collects the items and loads them onto delivery vehicles.
- Orders are then delivered to their respective destinations.
